Beneath the Mesa

Assessing Aquifer, Well, and Acequia Water Resources Across Sandoval County, New Mexico

Petar Djordjevic (PM) · **Meckrem Yousef** · **James Wanueka**
Dylan Gonzales · **Micah Watkins**

ENG 220 · Team 23 · Instructor: Ramiro Jordan

Background

- Where Sandoval County's water comes from: wells, rivers, and acequias
- Why the county spans several aquifer systems
- The concern: declining groundwater near Cuba
- What this project set out to check

Research questions

1

Groundwater levels

Write the question in one sentence, using the wording from the proposal.

2

Cuba's aquifers

Write the question in one sentence, using the wording from the proposal.

3

Water quality and acequias

Write the question in one sentence, using the wording from the proposal.

Data

Groundwater levels

Source, years covered, and number of sites

Aquifer tests

Source, years covered, and number of sites

Water quality

Source, years covered, and number of sites

Acequias

Source, years covered, and number of sites

Methods

Collect

Dylan Gonzales

One or two lines on what this step did

Clean

James Wanueka

One or two lines on what this step did

Analyze

Micah Watkins

One or two lines on what this step did

Present

Meckrem Yousef

One or two lines on what this step did

Results

Chart, map, or app screenshot

Copy this slide for each result

— ft

Key number and what it measures

What this shows

Two or three sentences on the main pattern in the chart.

Findings

What the data show

- Measured results, with numbers

What they suggest

- Likely explanations, stated as possibilities

Too limited to tell

- Questions the data can't answer yet

Limitations

- Areas with few or no monitoring wells
- Short or irregular water-level records
- Data the project couldn't get
- What a stronger study would need

Data coverage map

Where monitoring is dense, sparse, or absent
